

CCCG 2014 Accepted Papers

Esther Ezra , Jiemin Zeng and Jie Gao . Distributed Algorithm for Approximate Mobile Sensor Coverage
Jiemin Zeng and Jie Gao . A Linear Time Euclidean Spanner on Imprecise Points
Ahmad Biniiaz, Anil Maheshwari and Michiel Smid . Approximating Full Steiner Tree in a Unit Disk Graph
Zahed Rahmati , Mohammad Ali Abam , Valerie King and Sue Whitesides . Kinetic Data Structures for the Semi-Yao Graph and All Nearest Neighbors in \mathbb{R}^d
Zachary Abel, Erik D. Demaine , Martin Demaine , Hiro Ito , Jack Snoeyink and Ryuhei Uehara . Bumpy Pyramid Folding
André van Renssen . On the Spanning Ratio of Constrained Yao-Graphs
Stephan Friedrichs , Michael Hemmer and Christiane Schmidt . A PTAS for the continuous 1.5D Terrain Guarding Problem
Yong-Jin Liu, Chunxu Xu, Ying He and Deok-Soo Kim . The Duality of Geodesic Voronoi/Delaunay Diagrams For An Intrinsic Discrete Laplace-Beltrami Operator on Simplicial Surfaces
Mabel Iglesias-Ham, Michael Kerber and Caroline Uhler . Sphere Packing with Limited Overlap
Stephane Durocher , Robert Fraser , Alexandre Leblanc, Jason Morrison and Matthew Skala . On Combinatorial Depth Measures
Sándor Fekete, Stephan Friedrichs , Michael Hemmer , Joseph Mitchell and Christiane Schmidt . On the Chromatic Art Gallery Problem
Giovanni Viglietta , Giuseppe Antonio Di Luna, Paola Flocchini, Federico Poloni and Nicola Santoro. The Mutual Visibility Problem for Oblivious Robots
Oswin Aichholzer , Ruy Fabila-Monroy , Ferran Hurtado , Pablo Perez-Lantero, Andres J. Ruiz-Vargas, Jorge Urrutia and Birgit Vogtenhuber. Order types and cross-sections of line arrangements in \mathbb{R}^3
Cecilia Bohler, Rolf Klein and Chih-Hung Liu. Forest-Like Abstract Voronoi Diagrams in Linear Time
Hee-Kap Ahn , Sang Won Bae, Otfried Cheong , Dongwoo Park and Chan-Su Shin . Minimum Convex Container of Two Convex Polytopes under Translations
Xiao Ma and Michael Adams . An improved method for generating triangle-mesh models of images
Ahmad Biniiaz, Anil Maheshwari and Michiel Smid . Bottleneck Bichromatic Plane Matching of Points
Eli Fox-Epstein and Ryuhei Uehara. The Convex Configurations of "Sei Shonagon Chie no Ita" and Other Dissection Puzzles
Ghobad Emadi and Alireza Zarei. All Approximating Segments for a Sequence of Points
Stefan Schirra. On the Use of Adaptive Exact Decisions Number Types Based on Expression-Dags in Geometric Computing
Bahram Kouhestani, David Rappaport and Kai Salomma . Routing in a Terrain with the Shortest Beacon Watchtower
Stephane Durocher and Debajyoti Mondal . Drawing Plane Triangulations with Few Segments
Michael J. Bannister , William E. Devanny , Michael Goodrich , Joseph A. Simons and Lowell Trott. Windows into Geometric Events: Data Structures for Time-Windowed Querying of Temporal Point Sets
Aritra Banik, Jean-Lou De Carufel , Anil Maheshwari and Michiel Smid. Voronoi Games and Epsilon Nets
Luis Barba , Frank Duque, Ruy Fabila-Monroy and Carlos Hidalgo-Toscano. Drawing the Horton Set in an Integer Grid of Minimum Size

Stefan Funke and Martin P. Seybold . The Generalized Minimum Manhattan Network Problem (GMMN) - Scale Diversity Aware Approximation and a Primal-Dual Algorithm
Oswin Aichholzer , Thomas Hackl, Matias Korman , Marc Van Kreveld, Maarten Löffler , Alexander Pilz, Bettina Speckmann and Emo Welzl. Packing Plane Spanning Trees and Paths in Complete Geometric Graphs
Adrian Dumitrescu and Csaba Toth . Covering grids by trees
Mark Yagnatinsky and Boris Aronov . Quickly Placing a Point to Maximize Angles
Paul Accisano and Alper Ungor . Approximate Matching of Curves to Point Sets
Meera Sitharam, Mohamad Tarifi and Menghan Wang. An Incidence Geometry approach to Dictionary Learning
Stefan Huber , Oswin Aichholzer , Thomas Hackl and Birgit Vogtenhuber. Straight Skeletons by Means of Voronoi Diagrams Under Polyhedral Distance Functions
Borislav Karaivanov, Minko Markov, Jack Snoeyink and Tzvetalin S. Vassilev. Decontaminating planar regions by sweeping with barrier curves
Prosenjit Bose, Simon Pratt and Michiel Smid . The Convex Hull of Points on a Sphere is a Spanner
Luis Barba , Prosenjit Bose , Jean-Lou De Carufel , Mirela Damian, Rolf Fagerberg , André van Renssen , Perouz Taslakian and Sander Verdonschot . Continuous Yao Graphs
Salma Sadat Mahdavi, Saeed Seddighin and Mohammad Ghodsi. Covering Orthogonal Polygons with Sliding k -transmitters
Ruy Fabila-Monroy, Alfredo Garcia, Ferran Hurtado, Rafel Jaume , Pablo Perez-Lantero, Maria Saumell, Rodrigo I. Silveira, Javier Tejel and Jorge Urrutia. Colored Ray Configurations
Fidel Barrera-Cruz, Therese Biedl, Martin Derka, Stephen Kiazzyk, Anna Lubiw and Hamideh Vosoughpour. Turning Orthogonally Convex Polyhedra into Orthoballs
Haitao Wang and Wuzhou Zhang . The τ -Skyline for Uncertain Data
Stephane Durocher , Ian Munro , Hicham El-Zein and Sharma V. Thankachan . Low Space Data Structures for Geometric Range Mode Query
Binay Bhattacharya, Subhas Nandy and Sasanka Roy. Computing Centerpoint of a Point Set in \mathbb{R}^2 with Few Extra Variables
Sang Won Bae, Matias Korman and Yoshio Okamoto . Computing the Geodesic Centers of a Polygonal Domain
Michael Hoffmann , Marc van Kreveld, Vincent Kusters and Günter Rote. Quality Ratios of Measures for Graph Drawing Styles
Oswin Aichholzer, Michael Hoffmann, Marc Van Kreveld and Günter Rote. Graph Drawings with Relative Edge Length Specifications
Saurabh Ray , Nabil Mustafa and Rajiv Raman . A Separator Theorem for Intersecting Objects in the Plane
Tamal Dey , Fengtao Fan and Yusu Wang . Dimension Detection with Local Homology
Supantha Pandit and Apurva Mudgal. Geometric Hitting Set and Set Cover Problem with Half-Strips
Anna Lubiw and Hamideh Vosoughpour. Visibility Graphs, Dismantlability, and the Cops and Robbers Game
Stuart Macgillivray and Bradford Nickerson . Window Queries On Planar Subdivisions Arising From Overlapping Polygons
Alexander Idelberger and Maciej Liskiewicz . On the Computational Complexity of Partitioning Weighted Points into a Grid of Quadrilaterals
Al�x F. Brandt, Miguel Gaiowski, Pedro J. de Rezende and Cid C. De Souza . Minimum Dilation Triangulation: Reaching Optimality Efficiently

Prosenjit Bose , John Howat and Pat Morin . Searching by Panning and Zooming
Binay Bhattacharya , Minati De , Subhas Nandy and Sasanka Roy. Maximum Independent Set for Interval Graph and Tree in Space-efficient Models
Joshua Vander Hook and Volkan Isler . Pursuit and Evasion with Uncertain Bearing Measurements
Silvia Fernandez , Bernardo Abrego , Oswin Aichholzer , Pedro Ramos and Birgit Vogtenhuber. Non-Shellable Drawings of Kn with Few Crossings
Gokarna Sharma and Costas Busch . A Note on Online Steiner Tree Problems
Aniket Basu Roy, Sathish Govindarajan, Neeldhara Misra and Shreyas Shetty. On the d-Runaway Rectangle Escape Problem
Prayaag Venkat and David Mount . A Succinct, Dynamic Data Structure for Proximity Queries on Point Sets
Michael Biro. Planar Graphs with Many Perfect Matchings and Forests
Matthew P. Johnson and Deniz Sarioz . Computing the Obstacle Number of a Plane Graph
Matt Gibson , Erik Krohn and Qing Wang. On the VC-Dimension of Monotone Polygons
Sankalp Khare , Jatin Agarwal, Nadeem Moidu and Kannan Srinathan . Improved bounds for Smallest Enclosing Disk Range Queries
Shahin Kamali and Alejandro Lopez-Ortiz . Almost Online Square Packing
Qinxuan Pan. Uniqueness of Optimal Cube Wrapping
Amirmahdi Ahmadinejad and Hamid Zarrabi-Zadeh . The Maximum Disjoint Set of Boundary Rectangles
